### Basic Damper Overhaul **\$75**

The basic overhaul consists of a complete damper breakdown. Each part is inspected and cleaned. Elastomer rings are replaced and the damper is recertified for SFI safety specs. If your damper is in need of any replacement parts, such as the crank hub, outer shell, inner shell, etc., each part will be replaced at our warehouse distributor price level.

Is there any specific problem or area of concern with the damper? \_\_\_\_\_
