

## C-6 WIDE RATIO PLANETARY

Part #604020

### WARNING! IMPORTANT INFORMATION!

Check the Forward Clutch Drum after disassembling your C-6 transmission.

The needle bearing pocket should measure 0.400" - 0.405" deep (see illustration). Some early model C-6 transmissions had pockets that were only approximately 0.320" deep.

Using a shallow pocket Forward Clutch Drum in conjunction with the ATI 604020 Kit will result in transmission failure.

The current Forward Clutch Drum (available from Ford as service part # E9TZ-7A360-A) has the correct pocket dimension.
